re: Gasoline Pump

25X1A9a

Dear Mr. [REDACTED]:

Enclosed is bulletin of [REDACTED]
being returned as per request in your letter of 20 July 1953.

25X1A

Proposal for the substitution of the diaphragm in lieu
of the rotary type specified is rejected on the ground that
it is not so efficient as the rotary type, the reasons being
that more maintenance is required, the diaphragm needs periodic
replacement, and the flow is less even, thus the metering is
less efficient and the danger of overflow increased.

Very truly yours,

25X1A9a
